Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 and 18-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gimmler et al (US 5925387) in view of Applicant's disclosure.

Gimmler et al teach a powdery anti-stick agent comprising calcium carbonate coated with wax in the amounts claimed, wherein an atomizer is used and a particle size of 30 microns or less is obtained (see entire document, especially the abstract, column 2, line 40 to column 3, line 26).

The claims differ as to the addition of the anti-caking composition to a high moisture food such as cheese.

Applicant discloses the conventional use of carbonates as anti-caking agents and the use of carbonates in cheese (see page 1 of the specification).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made to use the anti-stick agent of Gimmler et al in a cheese because the use of carbonates and anti-caking agents in cheeses is well-known and conventional in the art.

Applicant's arguments filed April 4, 2007 have been fully considered but they are not persuasive.

Applicant argues that Gimmler et al does not teach using coated calcium carbonate with a high moisture food.

Gimmler et al teach a powdery anti-stick agent comprising calcium carbonate coated with wax.

Applicant discloses and it is well-known in the art to that carbonates are used as anti-caking agents in cheese.

Once the art has recognized the use of a coated carbonate in one food as an anti-caking agent the manipulation and use in other food products would be no more than expected and well-within the skill of the art.

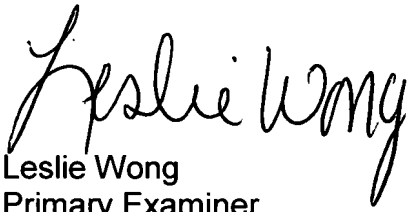

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
